

AI Exam Coach

Turn practice records
into the next study action

A B2B learning analytics prototype for education platforms and instructors

01

Practice records

Which answer did I choose?

02

Concepts and evidence

Where did I get stuck?

03

Next review

What should I review next?

Jungeun

Daytona data checks / Nosana study suggestions

Plenty of materials. What should I study next?

A problem I encountered while preparing for several professional exams.

Manual work continues after each practice session

01 Classify mistakes

Work out why an answer was wrong

02 Track weak concepts

Find recurring confusion

03 Find review material

Choose a lesson or textbook section

Who is it for?

Learners

Next review action

Connect practice records to concepts

Instructors and content teams

Plan lesson improvements

Support answer review and follow-up

Education platforms

Make use of existing content

Aim to link questions, keys and lessons

Choose an answer, review records, plan the next step

The workflow shown in the actual app recording

01

Choose an answer

Read the question and choose an answer.
Round grading requires all 40 answers.

02

Past practice records

Use past records to find concept confusion
and items that need review.

03

Next review

Turn concepts to revisit and linked
materials into the next study action.

Daytona validated 1,200 records in a sandbox

Recorded live Daytona sandbox result / 2026.09.19 14:20 KST

1,200

Records checked

Structural checks of IDs, choices and answer fields; not proof of answer correctness or learning impact.

Nosana generated a suggestion from a synthetic example

Recorded live Nosana call / qwen/qwen3.8-27b / 2026.09.19 14:20 KST

Synthetic example

No personal answers sent

AI output / review required

INPUT

Adding fractions
Different denominators

Demo uses a fixed synthetic input

STUDY SUGGESTION / ENGLISH TRANSLATION

Try one more fraction-addition problem:
find a common denominator, then add the numerators.
Then try another problem, first checking the step
that makes the denominators the same.

Original response in the Korean app

Nosana에서 예시 생성

Nosana 실호출 완료 · 합성 예시에 대한 AI 생성 복습 제안이며 검토가 필요합니다.

분모를 같게 만든 다음 분자끼리 더하는 분수 덧셈 연습 1개를 다시 풀어 보세요. 다음에는 분모를 같게 만드는 단계를 먼저 확인하는 문제를 하나 더 풀어 보세요.

모델: qwen/qwen3.8-27b · 확인 시각: 2026. 9. 19. 오후 2:20:33 KST

Next: validate the review workflow with instructors

Current evidence covers the local prototype and real external API calls.

Verified so far

Learning interface

Answer selection, past records and review links

Daytona

Real sandbox execution for structural data checks

Nosana

Live study suggestion from a synthetic example

Next to validate

Instructor review

Is there enough information to improve a lesson?

Learner feedback

Is the next review action clear after a suggestion?

Supporting materials

Can it link to evidence instructors may lawfully use?

Value to validate

A next review step for learners. A next teaching step for instructors.
